

Retail Sales Performance Report

Data Analysis & Visualization Project | By Sidharth Khare

1. Executive Summary

This report details the development and findings of a comprehensive Retail Sales Dashboard. By synthesizing large-scale transactional data into an interactive visual interface, the project provides a deep-dive into revenue drivers, regional performance disparities, and inventory efficiency. The primary goal was to transform raw metrics into strategic insights that facilitate optimized stock levels and targeted marketing efforts.

2. Key Performance Indicators (KPIs)

The following metrics represent the health of the retail operations for the analyzed period:

₹ 1,13,945

TOTAL REVENUE

21,545

UNITS SOLD

1,96,265

STOCK AVAILABLE

5.24

AVG. PRICE/UNIT

3. Deep-Dive Analysis

A. Temporal Trends & Seasonality

Analysis of the **Monthly Trend** reveals a consistent baseline of sales with a significant upward trajectory starting in April, peaking during the July-August window. This identifies a "Golden Quarter" where consumer demand is at its highest, likely influenced by seasonal shifts or mid-year consumer behavior.

B. Geographic Market Share

The revenue is remarkably balanced across the primary operating regions:

- **PL-South:** 51% of total revenue.
- **PL-Central:** 49% of total revenue.

This near-equal split suggests a mature market presence in both territories, with PL-South holding a slight edge in volume.

C. Product & Category Dominance

The **Categorical Analysis** identifies **Juice** as the powerhouse category, significantly outperforming Milk, Ready-to-Eat Meals, and Snacks. Within this category, **JuBrand3** and SKU **JU-021** are the primary contributors, indicating strong consumer loyalty to specific product lines.

4. Technical Implementation

The dashboard was engineered using advanced Excel methodologies to ensure dynamic reporting capabilities:

- **Data Cleansing:** Processed raw transaction logs to ensure accuracy in quantity and revenue calculations.
- **Interactive UI:** Integrated multi-category slicers for Year, Region, and Channel, enabling stakeholders to pivot data views instantly.
- **Visual Hierarchy:** Designed a layout that prioritizes high-level KPIs at the top, followed by trend analysis and granular SKU-level data at the bottom.

5. Strategic Recommendations

Inventory Optimization: The current stock-on-hand (1.96L) is significantly higher than monthly turnover. I recommend a "Lean Inventory" approach for non-core categories to free up working capital.

Expansion Strategy: Given the success in PL-Central and PL-South, the business should evaluate the untapped potential of the 'PL-North' region using the Juice category as a market-entry leader.
